## Algebra 2 Planning Guide --- Alignment with CCSS

### Chapter 1: Equations & Inequalities

**Most of this chapter was introduced in Alg 1, take to an appropriate Alg 2 level.**

Objectives:

The student will be able to:

- Evaluate and solve linear equations and inequalities
- Solve absolute value equations and inequalities

Essential Questions:

- How do you use inverse operations to solve linear equations and inequalities?
- How do you use inverse operations to solve linear equations and inequalities to obtain multiple solutions?

Textbook Resource	CCSS	Comments	Other Resources
1.2 Evaluate & Simplify Algebraic Expressions/ 1.3 Solve Linear Equations  Pacing: <b>1-2 Days</b>	<b>A.SSE.1 – Interpret expressions that represent a quantity in terms of its context.</b> <b>a. Interpret parts of an expression, such as terms, factors, and coefficients.</b> <b>b. Interpret complicated expressions by viewing one or more of their parts as a single entity. For example interpret <math>P(1 + r)^n</math> as the product of P and a factor not depending on P.</b> <ul style="list-style-type: none"> <li>• Define and recognize parts of an expression, such as terms, factors, and coefficients</li> <li>• Interpret parts of an expression, such as terms, factors, and coefficients in terms of the context</li> </ul>		

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

	<ul style="list-style-type: none"> <li>• Interpret complicated expressions, in terms of the context, by viewing one or more of their parts as a single entity</li> </ul>		
<p>1.4 Rewrite Formulas &amp; Equations</p> <p>Pacing: <b>1 Day</b></p>	<p><b>A.CED.4 – Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. For example, rearrange Ohm’s law <math>V = IR</math> to highlight resistance <math>R</math>.</b></p> <ul style="list-style-type: none"> <li>• Define a quantity of interest to mean any numerical or algebraic quantity (e.g., <math>2(a/b)=d</math> in which 2 is the quantity of interest showing that d must be even; <math>(\pi r^2 h/3)=V_{\text{cone}}</math> and <math>\pi r^2 h=V_{\text{cylinder}}</math> showing that <math>V_{\text{cylinder}}=3*V_{\text{cone}}</math>)</li> <li>• Rearrange formulas to highlight a quantity of interest using the same reasoning as in solving equations. (e.g., <math>\pi r^2</math> can be re-written as <math>(\pi r)r</math> which makes the form of this expression resemble <math>Bh</math>. The quantity of interest could also be <math>(a + b)_n = a_n b_0 + a_{(n-1)} b_1 + \dots + a_0 b_n</math>)</li> </ul>		
<p>1.6 Solve Linear Inequalities</p> <p>Pacing: <b>1 Day</b></p>	<p><b>A.CED.1 – Create equations and inequalities in one variable and use them to solve problems from a variety of contexts (e.g., science, history, and culture), including those of Montana American Indians. Include equations arising from linear <del>and quadratic functions</del>, and <del>simple rational and exponential functions</del>.</b></p> <ul style="list-style-type: none"> <li>• Describe the relationships between the quantities in the problem (for example, how the quantities are changing or growing with respect to each other); express these relationships using mathematical operations to create an appropriate equation or inequality to solve.</li> <li>• Use all available types of functions to create such equations, including root functions, but constrain to simple cases</li> <li>• Compare and contrast problems that can be solved by different types of equations</li> <li>• Compare and contrast problems that can be solved by different types of</li> </ul>	<p><b>A.CED.1 appears throughout the year</b></p> <p><b>Find activities that include science, history, culture, and IEFA</b></p>	

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

	<p>equations (linear, exponential)</p> <ul style="list-style-type: none"> <li>• Solve linear and exponential equations in one variable</li> <li>• Solve inequalities in one variable</li> <li>• Solve all available types of equations and inequalities including root equations and inequalities, in one variable</li> <li>• Create equations and inequalities in one variable and use them to solve problems</li> <li>• Create equations and inequalities in one variable to model real-world situations</li> <li>• Create equations (linear, exponential) and inequalities in one variable and use them to solve problems</li> </ul>		
<p>1.7 Solve Absolute Value Equations &amp; Inequalities</p> <p>Pacing: <b>1 Day</b></p>	<b>A.CED.1</b>	<b>Find activities that include science, history, culture, and IEFA</b>	<a href="http://www.doe.virginia.gov/testing/solsearch/sol/math/All/m_ess_a2-4a.pdf">http://www.doe.virginia.gov/testing/solsearch/sol/math/All/m_ess_a2-4a.pdf</a>
<p>Chapter 1 Project</p> <p>Pacing: <b>1 Day</b></p>			<p>*<a href="#">McDougall Littell EasyPlanner</a> has projects for each chapter. These are also saved in the common dropbox*</p> <p>Explorations in Core Math Performance Task Page 33-34</p> <p>See "On Core Mathematics" Focus on Modeling at the end of most chapters</p>
<p>Assessment</p> <p>Pacing: <b>1 Day</b></p> <p><b>Total: 6-7 Days</b></p>			

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

## Chapter 2: Linear Equations & Functions

**Domain/Range, function notation, and vertical line test covered in Alg 1; they should be continually applied through this course.**

Objectives:

The student will be able to:

- Evaluate and solve linear equations and inequalities
- Solve absolute value equations and inequalities

Essential Questions:

- How do you use inverse operations to solve linear equations and inequalities?
- How do you use inverse operations to solve linear equations and inequalities to obtain multiple solutions?

Textbook Resource	CCSS	Comments	Other Resources
2.2 Find Slope & Rate of Change  Pacing: <b>1 Day</b>	<b>F.IF.6 – Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over specified interval. Estimate the rate of change from a graph.</b> <ul style="list-style-type: none"> <li>• Recognize slope as an average rate of change</li> <li>• Estimate the rate of change from a linear or exponential graph</li> <li>• Interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval</li> <li>• Calculate the average rate of change of a function (presented symbolically or as a table) over a specified interval</li> </ul>	<b>2.2-2.4 review linear equations from Alg 1</b>	Review Activity: <a href="http://illuminations.nctm.org/Lessons/PiLine/PiLine-AS-Slope.pdf">http://illuminations.nctm.org/Lessons/PiLine/PiLine-AS-Slope.pdf</a>
2.3 Graph Equations of Lines/2.4 Write Equations of Lines	<b>F.IF.4 – For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. Key features include: intercepts;</b>	<b>F.IF.4 is a year-long standard that occurs throughout the year.</b>	

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

<p>Pacing: 2 Days</p>	<p><b>intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.</b></p> <ul style="list-style-type: none"> <li>• Define and recognize key features in tables and graphs of linear and exponential functions; intercepts; intervals where the function is increasing, decreasing, positive, or negative, and end behavior</li> <li>• Define and recognize key features in tables and graphs of linear, <del>exponential, and quadratic functions</del>; intercepts; intervals where the function is increasing, decreasing, positive, or negative, <del>relative maximums, symmetries, end behavior and periodicity</del></li> <li>• Identify the type of function, given a table or graph</li> <li>• <del>Identify whether a function is linear or exponential, given its table or graph</del></li> <li>• Interpret key features of graphs and tables of functions in terms of the contextual quantities each function represents</li> <li>• Sketch graphs showing the key features of a function, modeling a relationship between two quantities, given a verbal description of the relationship</li> </ul> <p><b>F.IF.5 – Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. For example, if the function <math>h(n)</math> gives the number of person-hours it takes to assemble <math>n</math> engines in a factory, then the positive integers would be an appropriate domain for the function.</b></p> <ul style="list-style-type: none"> <li>• Identify and describe the domain of a function, given the graph or a verbal/written description of a function</li> <li>• Identify an appropriate domain based on the unit, quantity, and type of function it describes</li> <li>• Relate the domain of a function to its graph and to the quantitative relationship it describes, where applicable</li> <li>• Explain why a domain is appropriate for a given situation</li> </ul> <p><b>F.IF.6</b></p> <p><b>F.IF.7 – Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases</b></p> <p><b>b. <del>Graph square root, cube root, and piecewise-defined</del></b></p>	<p><b>Begin using technology</b></p>	
-----------------------	---	--------------------------------------	--

Note: If a chapter section is not listed, it is meant to be skipped.

## Chapter 4: Quadratic Functions & Factoring

**Recommend that you split Chapter 4 into two units (4.1-4.5, and 4.6-4.10) for assessment.**

### Part 1 Objectives:

The student will be able to:

- Graph and identify key features of a quadratic function in standard form, vertex form, & intercept form
- Solve quadratic equations by factoring and finding square roots

### Part 1 Essential Questions:

- What is the standard form of a quadratic function and how can you use the key features of this form to help you graph?
- What is the vertex form of a quadratic function and how can you use the key features of this form to help you graph?
- What is the intercept form of a quadratic function and how can you use the key features of this form to help you graph?
- Which form of the quadratic is the most appropriate for showing zeroes and symmetry of a graph in terms of a real-world context?
- What is the difference in factoring  $x^2 + bx + c = 0$  and  $ax^2 + bx + c = 0$  when solving?
- When can you use square roots to solve a quadratic equation?

### Part 2 Objectives:

The student will be able to:

- Define  $i$  and write complex numbers in the form  $a+bi$  using the four operations
- Solve quadratic equations with real coefficients that have complex solutions
- Solve quadratic equations by completing the square and using the quadratic formula
- Solve and graph quadratic inequalities
- Create equations in two variables to represent quadratic relationships between data points

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

Part 2 Essential Questions:

- What is a complex number and how would you describe the complex number system?
- How do you use the four operations to simplify complex numbers?
- How will you know if a quadratic equation will have complex solutions?
- What is the importance of the discriminant when using the quadratic formula to solve?
- How are the solutions of quadratic inequalities related to compound inequalities (“and” vs. an “or”)?

## Chapter 5: Polynomials & Polynomial Functions

Objectives:

The student will be able to:

- Graph polynomial functions, by hand in simple cases or using technology for more complicated cases, and identify key features
- Apply arithmetic operations of addition, subtraction, and multiplication to polynomials
- Factor polynomials using any available method
- Define the remainder theorem for polynomial division and divide polynomials
- Use long division to rewrite simple rational expressions in different forms
- Use synthetic substitution to find rational zeroes (use technology as a tool for more complex solutions)
- Create equations in 2 variables to represent relationships between quantities using technology

Essential Questions:

- What are the key features of a polynomial function and how can you use them to graph?
- How do the sum, difference, and product of two polynomials prove closure under the operations of addition, subtraction, and multiplication?
- How can you use the x-intercepts and asymptotes to construct a rough graph of a polynomial function?
- When is synthetic substitution a preferred method of solving a polynomial?
- What are the similarities and differences between long division and synthetic division?

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

## Chapter 6: Rational Exponents & Radical Functions

**\*\*Note: Regular ended the semester at 6.3, Honors finished Chap 6**

Objectives:

Students will be able to:

- Solve rational and radical equations in one variable, and give examples showing how extraneous solutions may arise
- Apply the properties of rational exponents and perform function operations
- Find inverse functions
- Graph square root and cube root functions
- Solve simple radical equations in one variable

Essential Questions:

- How do you use inverse operations to solve rational and radical equations?
- How do the concepts of nth roots relate with rational exponents?
- Why is it necessary to check the possible solutions extraneous roots when solving a radical equation?

Textbook Resource	CCSS	Comments	Other Resources
6.1 Evaluate nth Roots and Use Rational Exponents  Pacing: <b>1 Day</b>	<b>A.REI.2 – Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.</b> <ul style="list-style-type: none"> <li>• Determine the domain of a rational function</li> <li>• Determine the domain of a radical function</li> <li>• Solve radical equations in one variable</li> <li>• Solve rational equations in one variable</li> <li>• Give examples showing how extraneous solutions may arise when solving rational and radical equations</li> </ul>		On Core: Page 9

## Semester 2

### Chapter 7: Exponential & Logarithmic Functions

Objectives:

Students will be able to:

- Graph exponential and logarithmic functions, by hand in simple cases, or using technology for more complicated cases, and show intercepts and end behavior
- Identify how key features of an exponential function relate to its characteristics in real context
- Recognize and know the definition of logarithmic functions
- Recognize the laws and properties of logarithms including change of base
- Evaluate a logarithm
- Solve exponential and logarithm equations in one variable

Essential Questions:

- How do you use the concept of exponential growth to work with the principle of compound interest?
- How do you convert between exponential and logarithmic form?
- How do you use the inverse relationship between exponential and logarithmic functions to solve equations?

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

## Chapter 13: Trigonometric Ratios & Functions

Objectives:

Students will be able to:

- Recognize which methods could be used to solve right triangles in applied problems
- Determine values of the trigonometric functions of an angle in standard position
- Define trigonometric ratios as related to the unit circle
- Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers
- Define a radian measure of an angle as the length of the arc on the unit circle subtended by the angle
- Solve a triangle using law of sines and law of cosines

Essential Questions:

- How do you use right triangle trigonometric ratios to find missing sides or angles of right triangles?
- How do you convert angle measures between degrees and radians and why would this conversion be necessary?
- How are special right triangles used to find the values of trigonometric functions on the unit circle?
- How do you know when to use law of sines vs. law of cosines to solve a triangle?

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

## Chapter 8: Rational Functions

Objectives:

Students will be able to:

- Recognize and use function notation to represent rational equations
- Graph simple rational functions by hand and general rational functions using technology
- Add, subtract, multiply, and divide rational expressions
- Solve simple rational equations in one variable, identifying how extraneous solutions may arise

Essential Questions:

- How do you find asymptotes of a rational function?
- How do you find x-intercepts of a rational function?
- How do you know when a rational expression can be simplified?
- Why is it necessary to check the possible extraneous solutions when solving a rational equation?

Note: If a chapter section is not listed, it is meant to be skipped.

## Chapter 11: Data Analysis & Statistics

Objectives:

Students will be able to:

- Recognize the purpose of surveys, experiments, and observational studies in making statistical inferences and justifying statistical conclusions
- Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages
- Describe the characteristics of a normal distribution
- Understand statistics as a process for making inferences about population parameters based on a random sample from that population
- Define margin of error
- Identify data or discrepancies that provide the basis for rejecting a statistical model

Essential Questions:

- What are the different ways in which data can be organized and analyzed?
- How can you use the normal curve to find probabilities of an event?
- How can you use z-scores to find probabilities of an event?
- How can you use a sample survey to estimate a population mean or proportion and develop a margin of error?
- How do you know when to accept or fail to accept a statistical claim?

Note: If a chapter section is not listed, it is meant to be skipped.

~~Strike-through~~ means that the standard appears at a different time.

\*\*This is the first time students are seeing this ever. Develop this standard to an appropriate level for the class.

## Chapter 12: Sequences & Series

Objectives:

Students will be able to:

- Define and use sequences and series
- Analyze arithmetic and geometric sequences and series
- Find sums of finite arithmetic and geometric series
- Find sums of infinite geometric series
- Define explicit function and recursive process

Essential Questions:

- How do you find the first term in an arithmetic or geometric sequence given at least two other terms?
- How can you write an arithmetic or geometric formula (explicit or recursive) given the first term and the common difference or ratio?
- How do you find the sum of a series using summation notation?
- How do convert a sequence to summation notation?

Textbook Resource	CCSS	Comments	Other Resources
12.1 Define and Use Sequences and Series  Pacing: <b>1 Day</b>	<b>F.BF.1 – Write a function that describes a relationship between two quantities.</b>	<b>Review vocabulary to prepare for upcoming concepts, can use 12.1 Activity also</b>	On Core: Page 342
12.2 Analyze Arithmetic Sequences and Series  Pacing: <b>1 Day</b>	<b>F.BF.1</b> <b>a. Determine an explicit expression, a recursive process, or steps for calculation from a content.</b>	<b>Review vocabulary to prepare for upcoming concepts</b>	On Core: Page 347

Note: If a chapter section is not listed, it is meant to be skipped.
